

Internship

1- Chief of Staff of the Royal Armed Forces - Ministry of Defence.

Internship description

During the training period, I gained a lot of experience and knowledge in the field of technology and computers. From the hardware side, I learned the basics of how a computer works and what the main components are that affect its operation. In addition, how to disassemble and assemble the physical parts and how to choose the most suitable ones for the device, such as RAM, and CPU. IT service center give us information about networks and the most important methods used to connect networks, in addition to the most important methods used to expand the scope of the Internet network. Moreover, we disassembled and repaired a laptop, which is more difficult than a desktop computer.

From the software side, I learned about the most important operating systems and the important differences between them, like Windows and Kali Linux. In addition, how to install a new system for the device and how to configure it for a new user. Moreover, the center gave us an overview of the most important programs they use to solve the most important problems they face. For example, we used the SDI application to solve device driver's problems and learn how to use the command prompt (CMD). Also, the IT service center also gave a lecture on cyber security.

2- Rihal.

Internship description

The #SparkToCode training program covers several areas:

1. Programming Fundamentals: We worked on improving practical programming skills, including writing clean and logical code, problem-solving, debugging, and maintaining code.
2. Git and GitHub: A significant portion of the program was dedicated to learning how developers manage code in professional work environments, understanding Git fundamentals, the GitHub workflow, working with branches, collaborating on a single database, and managing project changes.
3. Teamwork: We were divided into teams and had to communicate, divide tasks, solve problems together, and deliver projects.
4. Real-World Projects: After the initial training, we moved on to working on practical projects. We used the tools and development skills we learned to build and deliver projects as a team, rather than just completing individual coding exercises. The program also included project presentations.
